Local Anaesthetic and Extraction

Sometimes our teeth can get sick and need to be collected by the tooth fairy.

First, we put some sleepy cream next to your tooth using a little cotton stick.

This can taste a bit minty and feel a bit tingly.

Once the sleepy cream is on your tooth, we check that your tooth goes to sleep.

This might make your cheeks feel a bit big and puffy, like a chipmunk.

When your tooth is asleep, we use tooth huggers to wriggle your tooth out.

It might feel like a bit of pushing.

Once your tooth has come out, you can take it home to be picked up by the tooth fairy.

Which tooth fairy do you want to come visit you?
